

Automation of Quality Control for Global Ocean Data

Dr. Serdar Demirel, Dr. Sebastian Mieruch,
Prof. Dr. Reiner Schlitzer

*Alfred-Wegener-Institut,
Bremerhaven, Germany*

- Team name: **PARROT**s -- dee**P** le**AR**ning fo**R** quality control of **O**cean da**Ta**

- Application: **Salacia** -- Roman mythology, the goddess of salt water and wife of Neptune

➤ What is our dataset ? Where it is coming from ?

- Research vessels like Polarstern take ocean profiles using CTD sondes, which measure

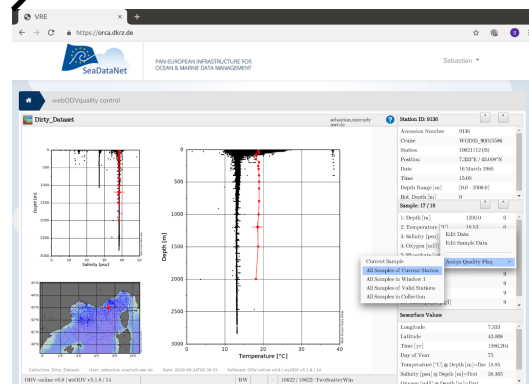

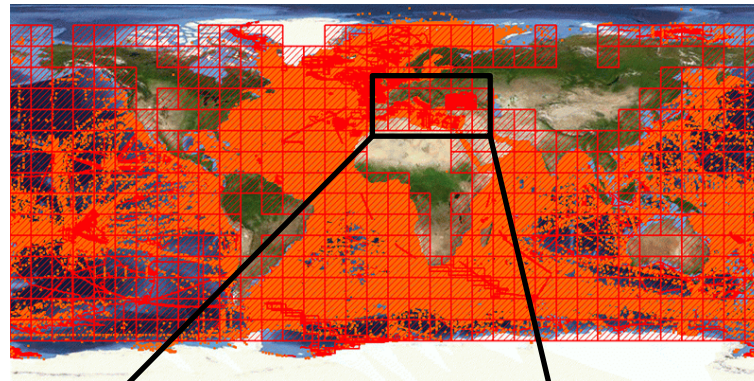

Properties:

- pressure (depth),
- temperature,
- salinity, and some others

➤ The source of our dataset

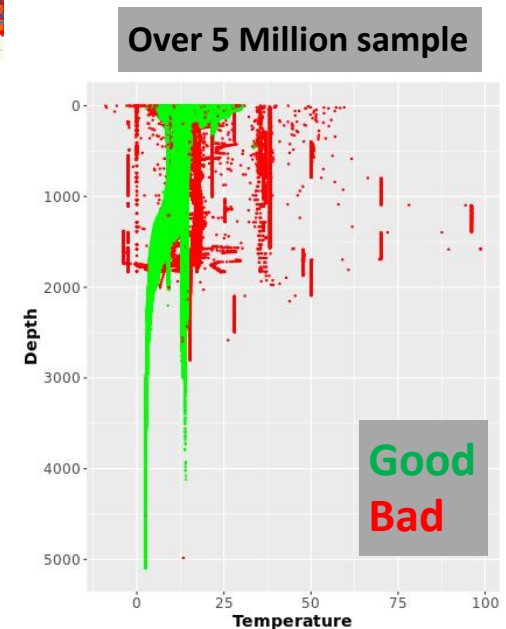

- A project that more than 35 countries and more than 100 data centers is included
- Data from year 1800 to now
- Approx. 2 Million data sets (ca. 9 Million profiles with many samples each)
- **All data quality controlled but how ?**

Experts

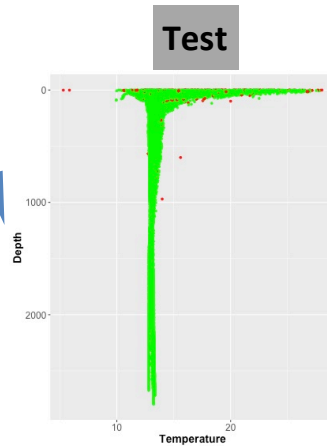

using the Ocean Data View (ODV) software

➤ Preliminary studies

➤ Separation of chosen section: 75% for training and 25% for test

- Features:**
- Depth,
 - Temperature,
 - Latitude,
 - Longitude,
 - and some others

➤ Preliminary studies

➤ Testing of trained Neural Network

Test Data

Trained Neural Network

Predictions

?

Question: Can Neural Networks mimic the decisions of an expert ?

➤ As summary

➤ Why **Salacia** need to be used ?

- The experts spend too much time to analyze every single sample
- Automation of Quality Control is a necessity

➤ Future of **Salacia**

- Development of a **skillful** and **reliable** AI system
- Huge impact on the Ocean Science community
- Covering the World Ocean

➤ **Thank you for your attention**
